SAP Solution Manager Implementation for large scale Manufacturing Client

Background

This customer had new SAP Implementation on global scale. They had challenges with outdated business processes and their implementation was wide spread across the globe

ATG

ATG proposed and implemented document management & configuration management. Fully installed Solution Manager functions including project administration, blue printing, testing, training. Successfully integrated HPQC and uPerform.

Solutions Implemented

PROCESSES IMPLEMENTED: Utilized Solution Manager implementation functions including project administration, blue printing, configuration, testing and training. Implemented the key end to end processes using Solution Manager. All configuration and development only via Solution Manager Integrated to HP QC for E2E testing. Integrated uPerform for Training and BPML development

Outcome

- 150 team members using one central platform
- Eliminated usage of spreadsheets and weekly project report updates
- 1500 documents, 450 test scripts and 900 configuration objects in one central place
